*Sub C3*  
*B<sup>2</sup>* 1. (amended) An analog of a protein regulating  
complement activation having short consensus repeats of amino  
acid sequence selected from the group consisting of complement  
receptor 1, complement receptor 2, decay accelerating factor,  
membrane cofactor protein, C4 binding protein, and factor H, and  
[these] those complement regulating proteins wherein the carboxy  
terminus is removed to allow the protein to be secreted, wherein  
said protein analog is selected from the group consisting of  
complement regulating proteins containing short consensus repeats  
derived from a second, different complement regulating protein,  
complement regulating proteins wherein the short consensus  
repeats are rearranged, complement regulating proteins having  
defined amino acid substitutions in the short consensus repeats
